CATALOGUE OF ELECTIVE COURSES

6B04118 Finance

 $year\ of admission-2022$

Reviewed and approved at the meeting of the Faculty's Educational and Methodological Council Chairman of the UMS Faculty

Approved at the meeting of the Educational and Methodological Council of the University Protocol No. 5 of 25.05.2022 year

Liniversity 5 Oky- appliemental Walnut Koacoba K.C.

Student's Memo

Dear student of "ALIKHAN BOKEIKHAN UNIVERSITY", a catalog of elective disciplines is offered to your attention. This is a systematic list of all optional academic subjects with a brief description. It is designed so that you can quickly, conveniently and comprehensively form an individual learning trajectory. This is an assistant in creating your own curriculum.

In accordance with the credit technology of education, all academic disciplines are divided into three cycles: general education disciplines (GED), basic disciplines (BD) and specialized disciplines (SD). Disciplines in each of these cycles are divided into types: mandatory component, university component and elective component (elective disciplines).

The disciplines of the compulsory component are determined by the state mandatory standard of higher education according to the educational program and are mandatory for students to study.

Disciplines of the elective component are presented according to the educational program at a meeting of the department with the participation of employers and students. From the entire list of elective courses offered, you can choose the most interesting ones.

The methodology for choosing elective courses using the catalog for inclusion in your individual curriculum is as follows:

1. Find the course and academic semester in the list.

- 2. Determine the number of credits in an elective subject issued from the structure of the educational program of higher education.
- 3. Carefully read the list of elective courses offered. Focus on combining academic subjects according to the selected courses. Only one subject can be selected from a group of elective courses.
 - 4. Read a brief description of the elective courses you are interested in and make your choice.
- 5. Check whether the total number of credits for the courses you have chosen corresponds to the required amount of credit in accordance with the structure of the higher education program.
 - 6. When choosing elective disciplines, use the help of an adviser.

№ cou rse	Name of the discipline	Number of credits	Prerequisites	Postrekvizity	Brief description indicating the purpose of the study, executive summary, and expected results of the study(knowledge, skills, com- petencies)						
			CYCLEO	 F BASIC DISCIPLI	NES						
	Component of choice (CC)										
	Module 8 Accounting and analytical module										
	Statistics	5			Content: the discipline forms knowledge of statistical methods of calculation and analysis of indicators, methods of statistical observation, sources of statistical information; the ability to generalize statistical information using methods of summarizing and grouping primary statistical data, calculate indicators, build tables and graphs, analyze indicators and draw conclusions; skills in methods of collecting and processing statistical information, calculating statistical indicators. Expected results: Know: sample observations, statistical methods for studying the dynamics of social phenomena, the subject and method of statistics, statistical observation, statistical summary and grouping, absolute and relative values, average values and indicators of variation, selective observation, series of dynamics, indices, statistical study of the relationships of social phenomena, statistics of population and labor resources, system of national accounts, main macroeconomic indicators, statistics of living standards of the population. Be able to: formulate the goals and objectives of statistical research; draw up statistical research programs, systematize and summarize economic information, analyze the structure and development						
1	Socio-	5		Financialstatis-	trends of the Kazakhstani and world economies, forecast economic processes; collect and register information, carry out primary processing and control of observation materials, perform calculations of statistical indicators and formulate the main conclusions, carry out a comprehensive analysis of the studied socioeconomic phenomena. apply acquired knowledge and possess skills: in practice; Skills: use of statistical information in the further development of general and special economic disciplines; application of statistical methods for the processing and analysis of quantitative and qualitative information on the development of socioeconomic processes and phenomena. Competencies: economic, organizational and managerial.

			tics Module 14	activities/ Financial analysis Financial and analy	of application and collection of statistical indicators, the subject and objectives of banking statistics. Forms a system of statistical indicators of money circulation, macroeconomic indicators, based on statistical methods of analysis and forecast of money supply and money circulation. Expected results: Know: methods for calculating economic and socio-economic indicators based on standard methods, taking into account the current regulatory framework. Be able to: draw up statistical reports on the activities of financial and banking organizations; collect the necessary data, analyze them and prepare an information review and / or analytical report. Skills: use of modern technical means and information technologies for solving analytical and research problems. Competencies: special
11	Big Date	4	Fundamentals of	Modern banking	Content: during the course, the stu-
11	and busi-	4	economic analy-	technolo-	dent must: be able to formulate and solve
	nessanalyt-		sis/ Functional	gies/Leasing and	problems arising in the course of production
	ics		and cost analy-	leasing operations	activities that require in-depth professional
			sis		knowledge; choose the necessary approach-
					es and methods of problem analysis, as well
					as modify existing and develop new ones, depending on the tasks of a particular case;
		l	1		depending on the tasks of a particular case,

					analyze and design software tools for data
					analysis, as well as algorithms, models and the methods required for the development of
					software systems, effective data analysis
					and extraction of knowledge from data; ap-
					ply quantitative and qualitative methods and
					techniques to collect primary information for research, as well as to develop effective
					solutions to problems.
					Expected results:
					Know: knowledge of data collection,
					analysis and storage; methodology, theory and practice of business intelligence, master
					the basic principles and modern approaches
					to data analysis, models and work with data
					processing and analysis tools.
					Be able to: process cloud computing data that can significantly reduce
					information technology infrastructure costs
					(in the short and medium term) and respond
					flexibly to changing computing needs using the elastic computing properties of cloud
					services.
					Skills: possession of modern
					information technologies and programs, the
					result of the analysis of reporting in the process of substantiating the organization's
					development strategy.
					Competencies: professional.
11	Cloud com-	4	Fundamentals of economic analy-	Modern banking technolo-	Content: during the course, the student should know the network models of
	putingser- vices		sis/ Functional	gies/Leasing and	cloud services and the design features of
			and cost analy-	leasing operations	cloud architectures. Manage and store data.
			sis		Design cloud solutions and calculate their
					cost. Define the stages of transition to a multi-tenant, dedicated, customizable, mul-
					ti-tenant architecture. Create models for the
					organization of a multi-tenant data ware-
					house. Expected results:
					Know: knowledge of data collection,
					analysis and storage; IBM cloud solution
					implements IaaS, SaaS, PaaS models within not only public, but also private and hybrid
					clouds.
					Be able to: cloud computing data that
					can significantly reduce information
					technology infrastructure costs (in the short and medium term) and respond flexibly to
					changing computing needs using the elastic
					computing properties of cloud services.
					Skills: possession of modern information technologies and programs,
					skills in using types of cloud computing, the
					main types of cloud services and their
					advantages, which help companies solve complex problems in the digital age
					Competencies: professional.
