

ALIKHAN BOKEIKHAN UNIVERSITY

Faculty of information technology and
economics Department of business and
management

CATALOGUE OF THE ELECTIVE COURSES

6B04116 Economics

Year of entrance-2023

Semey 2023

Developed by the department of "Business and management"

Discussed and approved at the meeting of the department of Business and management (protocol № 8 of april 13, 2023)

Reviewed and recommended for approval at a meeting of the Academic quality council of the faculty (protocol № 3 of may 3, 2023)

Reviewed and recommended for approval at a meeting of the educational and methodological council of the university (protocol № 5 of may 25, 2023)

Student's Memo

Dear student of "ALIKHAN BOKEIKHAN UNIVERSITY", a catalog of elective disciplines is offered to your attention. This is a systematic list of all optional academic subjects with a brief description. It is designed so that you can quickly, conveniently and comprehensively form an individual learning trajectory. This is an assistant in creating your own curriculum.

In accordance with the credit technology of education, all academic disciplines are divided into three cycles: general education disciplines (GED), basic disciplines (BD) and specialized disciplines (SD). Disciplines in each of these cycles are divided into types: mandatory component, university component and elective component (elective disciplines).

The disciplines of the compulsory component are determined by the state mandatory standard of higher education according to the educational program and are mandatory for students to study.

Disciplines of the elective component are presented according to the educational program at a meeting of the department with the participation of employers and students. From the entire list of elective courses offered, you can choose the most interesting ones.

The methodology for choosing elective courses using the catalog for inclusion in your individual curriculum is as follows:

1. Find the course and academic semester in the list.
2. Determine the number of credits in an elective subject issued from the structure of the educational program of higher education.
3. Carefully read the list of elective courses offered. Focus on combining academic subjects according to the selected courses. Only one subject can be selected from a group of elective courses.
4. Read a brief description of the elective courses you are interested in and make your choice.
5. Check whether the total number of credits for the courses you have chosen corresponds to the required amount of credit in accordance with the structure of the higher education program.
6. When choosing elective disciplines, use the help of an adviser.

№	Name of the discipline	Number of credits	Prerequisites	Postrequisites	A brief description indicating the purpose of the study, a brief summary and the expected results of the study (knowledge, skills, competencies)
BASIC DISCIPLINES					
Optional components (OC)					
Modul 10 - Finance and statistics					
1	Statistics	5	-	Economic analysis	<p>Contents: basic concepts and categories of statistics, the process and stages of statistical research, time series, indices, sample observation, in addition, statistical and socio-economic indicators used to analyze the current social and economic situation.</p> <p>Expected results:</p> <p>Know: sample observations, statistical methods for studying the dynamics of social phenomena, the subject and method of statistics, statistical observation, statistical summary and grouping, absolute and relative values, average values and indicators of variation, sample observation, series of dynamics, indices, statistical study of the interrelationships of social phenomena, statistics of the population and labor resources, system of national accounts, basic macroeconomic indicators, statistics of the standard of living of the population.</p> <p>Be able to: formulate the goals and objectives of statistical research; draw up statistical research programs, systematize and generalize economic information, analyze the structure and development trends of the Kazakhstani and world economy, predict economic processes; collect and register information, carry out primary processing and control of observation materials, perform calculations of statistical indicators and formulate the main conclusions, carry out a comprehensive analysis of the studied socio-economic phenomena. apply the acquired knowledge and skills: in practice.</p> <p>Skills: use of statistical information in the further development of general and special economic disciplines; application of statistical methods for the processing and analysis of quantitative and qualitative information on the development of socio-economic processes and phenomena.</p> <p>Competencies: economic, organizational and managerial</p>
1	Socio-economic statistics	5	-	Economic analysis	<p>Contents: bases and system of indicators of socioeconomic statistics, statistics of population and labor resources, statistics of national wealth, costs and intermediate consumption, commodity and money circulation, price statistics, statistics of production efficiency, main macroeconomic indicators, statistical study of dynamic socio-economic phenomena.</p> <p>Expected results:</p> <p>Know: methodological foundations of the concepts of assessing the state of the economic, social, political environment; principles of statistical concretization of systems of indicators of various areas of socio-economic statistics, methods of their measurement or calculation; construction methodology and information capabilities of the system of generalizing statistical indicators</p> <p>Be able to: systematize and summarize quantitative and qualitative statistical information; draw up a plan</p>

					for a statistical study of the real socio-economic situation, form a circle of initial indicators characterizing it, conduct
--	--	--	--	--	--

					targeted data collection and statistical analysis using appropriate methods; develop specific proposals based on the results of research, prepare reference and analytical materials for management decisions Skills: conducting a statistical study of the real socioeconomic situation, evaluate the proposed options for management decisions and develop proposals for their improvement, taking into account the criteria of socioeconomic efficiency Competencies: economic, organizational and managerial
--	--	--	--	--	--

Modul 11 - Management and Marketing

2	Management	6	-	Labor economics Personnel management Institutional economy Operations management	Content: tasks and content of the course management, essence and principles of management, concepts and types of organization, information support of management, communication in management, management decisions in management, management methods, planning in management. organization as a function of management, motivation in management, control in the management system, leadership: power, influence, partnership, leadership: leadership style and manager's image, conflict, stress and change management, management culture, manager's business ethics Expected results: Know: methods of management and building organizational structures of management; apply methods, means and techniques of management in professional activities. 					Be able to: operate with legal concepts and norms of tax law, draw up and draw up legal documents, give qualified legal advice, understand the content of the legal rights and obligations of subjects of tax legal relations, the mechanism of their interaction. Skills: determine the tax base; calculate the main performance indicators of the company and taxes by type; give legal advice in the field of taxation, systemic, structural and logical analysis, drafting legal documents, correct use of terminology Competencies: economic, organizational and managerial,
Modul 14- Fiscal policy					

9	1C accounting	5	Accounting and auditing	Big Date and business analytics Cloud computing services Valuation of assets and business valuation	<p>Contents: a system for automating the activities of an enterprise, designed for accounting and accounting operations; accounting for commodity and material assets, mutual settlements with counterparties, payroll, calculation of depreciation of fixed assets, accounting for any sections to generate high-quality and timely information about the financial and economic activities of the entity.</p> <p>Expected results: Know: the structure of the program 1C Accounting and financial reporting of firms, legislative and guidance materials on the organization of accounting and financial reporting in various organizations of various forms of ownership, international financial reporting standards for accounting, the system of accounting accounts, the basics of accounting automation. Be able to: fill in and edit the information base; fill out documents and perform operations in various areas of accounting; prepare and read accounting reports; search for previously entered information; edit the mistakes made, etc. Skills: determine the tax base; comprehensively apply the rules and methods of accounting, including in the 1C accounting program, acquire practical skills to create new records in the information base; edit previously entered entries in the infobase; delete unnecessary objects from the infobase; draw up accounting records in various ways, etc Competencies: professional</p>
9	Financial statements of the company	5	Accounting and auditing	Big Date and business analytics Cloud computing services Valuation of assets and business valuation	<p>Content: principles of financial reporting in the Republic of Kazakhstan, regulatory framework and the basis for the formation of financial statements in the Republic of Kazakhstan, elements of financial statements, the content of the balance sheet items, the content and structure of the income statement, the procedure for compiling a cash flow statement, generating a report on changes in capital, composition, disclosure of the explanatory note and accounting policy, the sequence of the process of compiling consolidated financial statements, the system of financial ratios of the company.</p> <p>Expected results: Know: the composition and content of the financial statements of enterprises of the Republic of Kazakhstan; financial reporting structure; tools for processing economic data in accordance with the task. Be able to: analyze the financial condition of the company and the situation in the financial market, create financial statements, calculate financial ratios with the development of conclusions; has the ability to analyze and use sources of information to solve problems in the field of presentation and interpretation of the financial statements of a group of companies Skills: documenting business transactions, preparing analytical and informational materials on the financial statements of a group of companies for the company's management and stakeholders necessary for making strategic decisions. Competencies: professional</p>

10	State regulation of the economy	5	Economic theory Macroeconomics	World economy and IEE International economy	<p>Contents: the theoretical aspect of state regulation of the economy and its object, the concept of the GRE methodology and its main elements, the organizational foundations of economic regulation and its foreign experience, the general characteristics of the transition economy and its patterns, economic growth: the main factors and state measures to ensure it, socio-economic forecasting and planning as the initial stage of the state's activity in regulating the economy, directions of scientific and technological progress and the role of the state in its acceleration, state regulation of rational employment and social protection of the population, formation and mechanisms for the implementation of the investment policy of the state, the system of state measures for the efficient use of land resources, financial and budgetary methods of regulating the economy, the main mechanisms for implementing the monetary policy of the state.</p> <p>Expected results: Know: patterns of functioning of the modern economy at the macro level, the main features of the country's economy; the main methods and means of state regulation of the economy, the features of their impact on the activities of industries and enterprises. Be able to: determine the features of the development of the country's economy; analyze in interconnection economic phenomena, processes and institutions at the macro level; identify problems of an economic nature, propose ways to solve them, taking into account the criteria of socio-economic efficiency and possible consequences. Skills: evaluate the effectiveness of the main methods of state regulation; modern methods of calculation and analysis of socio-economic indicators characterizing economic processes at the macro level Competencies: professional</p>
10	Public private partnership	5	Economic theory Macroeconomics	World economy and IEE International economy	<p>Content: the content of the institution of public-private partnership (PPP), including the concept of PPP, forms, types and models of public-private partnership, objects and subjects of PPP, nature and content of public-private partnership agreements, features of their conclusion, execution, modification and termination.</p> <p>Expected results: Know: the goals and objectives of the legal regulation of public relations in the field of public-private partnership at the present stage, directions for improving the legal regulation in the field of PPP. Be able to: determine the features of the development of the country's economy and the content of public-private partnerships, apply the rules of law governing public relations in the relevant area, including in case of problems and contradictions between the rules; to argue the decisions made, including, taking into account the possible consequences, to foresee the consequences of his decisions; competently interpret legal acts in their interaction. Skills: evaluation of PPP models; possession of the main methods of interpreting the norms of civil law governing obligations in the field of PPP. Competencies: professional</p>
Modul 16 - IT technologies in the economy					

11	Big Data and business analytics	4	1C accounting Financial statement of the company	Valuation of assets and business valuation	<p>Contents: theoretical and methodological foundations of business intelligence, economic performance indicators, statistical quality characteristics, statistical analysis of performance indicators, financial performance, statistical information processing programs, presentation of the capabilities of the SPSS Statistics package for the purposes of analyzing socio-political processes, etc.</p> <p>Expected results:</p> <p>Know: algorithms, models and methods required for the development of software systems, effective data analysis and knowledge extraction from data, the main methods of data preprocessing and visualization data mining technologies, methods and models of Data Mining features of the Big Data direction, its main differences from the direction business analytics methods for solving problems of processing and analyzing big data.</p> <p>Be able to: describe the possibilities of using information technologies and an innovative approach, choose the method of software tools for data analysis and cloud services; describe the possibilities of using information technologies and innovative approach; own the techniques and methods of collecting socio-economic and other statistical information, formulate and solve problems that arise in the course of production activities that require indepth professional knowledge; choose the necessary approaches and methods for analyzing problems, as well as modify existing ones and develop new ones, depending on the tasks of a particular case; analyze and design data analysis software tools.</p> <p>Skills: master the methodology of collecting information, design algorithms, models and methods for software and cloud architectures, apply quantitative and qualitative methods and techniques to collect primary information for research, as well as develop effective solutions to problems.</p> <p>Competencies: professional</p>
11	Cloud computing services	4	1C accounting Financial statements of the company	Valuation of assets and business valuation	<p>Contents: introduction to cloud technologies, network models of cloud services, features and main aspects of designing cloud architectures, models for organizing a multi-tenant data storage, separate databases, an overview of the most popular cloud services, the basics of working with cloud storage systems and others</p> <p>Expected results:</p> <p>Know: network models of cloud services and design features of cloud architectures, basic concepts and terminology of cloud technologies; scopes of cloud technologies; the concept of cloud computing in relation to business activities; know the basic principles of cloud computing, the principles and methods of developing applications for cloud systems using various platforms; cloud computing infrastructure;</p> <p>Be able to: choose software tools for data analysis and cloud services, describe the possibilities of using information technologies and an innovative approach; manage and store data, determine the stages of transition</p>

					to a multi-tenant, dedicated, customizable, multi-tenant architecture, use cloud
--	--	--	--	--	--

					<p>programming techniques, evaluate the effectiveness of the application, long-term prospects, studying the economics of cloud computing;</p> <p>Skills: design algorithms, models and methods for software and cloud architectures, create models for organizing a multi-tenant data warehouse, developing software for cloud systems, system administration for developing and maintaining applications deployed in the clouds</p> <p>Competencies: professional</p>
Modul 18 - Business valuation					
12	Cost management	4	Labor economics Personnel management	Quality control Assessment of innovative potential Manufacturing practice III	<p>Content: the role of the impact of costs on the formation of the financial result of the enterprise; methods and methods of accounting and cost analysis; to form practical skills for determining managerial decision-making based on cost analysis. Systematize the results of research, conduct analysis in the interests of ensuring cost management of the enterprise.</p> <p>Expected results:</p> <p>Know: the essence, meaning, goals and objectives, techniques and methods, principles of effective cost management of an enterprise in a market economy; Be able to: independently make effective management decisions on cost management based on analysis and evaluation of the internal and external environment, comparing costs, production volumes and prices; to calculate the costs of the enterprise; to possess the Skills of cost management in the short, medium and long term, as well as cost management methods to justify management decisions. Competencies: special</p>
12	Controlling	4	Labor economics Personnel management	Quality control Assessment of innovative potential Manufacturing practice III	<p>Content: controlling as a scientific discipline deals with the theory of measuring resources, the results of production and economic activities and processes. The task of controlling is to teach students the theory, methods and tools of measurement in various angles: resources (materials, labor, fixed assets, finance, etc.); functional areas and processes (production, R&D, procurement, sales, etc.); controls (accounting, planning, control, analysis).</p> <p>Expected results:</p> <p>Know: the basic concepts of controlling, their essence, interrelation and interdependence; the basics of modern approaches to controlling management in an organization; Be able to: use a system of knowledge of methods of controlling organization in an enterprise (company); to use the knowledge gained in order to form a management and product controlling system; to apply practical Skills in assessing the costs of controlling; to identify problems when analyzing specific situations and suggest ways to solve them in the field of controlling management in an enterprise; analyze controlling management processes.</p> <p>Competencies: special</p>

Modul 13 - Market planning					
13	Planning and budgeting system	4	Finance World financial markets Tax and taxation Tax law of the Republic of Kazakhstan	Business Law Competition law Sectoral economics Service economy	<p>Content: budget planning system, budgeting and efficient spending of budget funds, types of planning and budgeting, assessment of the efficiency of spending budget funds, drawing up a program for the development of the territory and the implementation of investment projects, attracting private investment.</p> <p>Expected results: Know: indicators of achievement of competencies, set goals and formulate tasks related to the implementation of professional functions. Be able to: develop plans for enterprises and carry out calculations of business planning sections and evaluate the effectiveness of individual business processes and management decisions; perform calculations on sections of the business plan, draw up medium-term budgets. Skills: implement a budgeting system and draw up medium-term budgets of firms; analyze and meaningfully interpret the results obtained in accordance with the standards adopted by the organization Competencies: professional</p>
13	Internal production planning and budgeting	4	Finance World financial markets Tax and taxation Tax law of the Republic of Kazakhstan	Business Law Competition law Sectoral economics Service economy	<p>Contents: main methodological, organizational and legal aspects of planning at an enterprise, technologies and economic mechanisms of budgeting, problems of implementing a budgeting system at an enterprise based on the use of information technology.</p> <p>Expected results: Know: the basics of organizing planned work at the enterprise; regulatory framework for planning; basics of strategic planning; basics of production planning; Be able to: develop plans for enterprises and carry out calculations of sections of business planning, implement a budgeting system and draw up medium-term budgets of firms, draw up an algorithm for carrying out planned work at an enterprise; evaluate planned indicators based on the use of a set of planning methods; calculate and scientifically substantiate the production program of the enterprise; calculate the cost of production; draw up a balance of working time and predict the number of staff; develop a financial plan. Skills: to form the skills of developing plans for the socioeconomic development of the enterprise, the skills of qualified management of the financial and economic divisions of the enterprise. Implement a budgeting system and draw up medium-term budgets for firms Competencies: professional</p>
Modul 18 - Business valuation					

14	Valuation of assets and business	5	Economic analysis 1C accounting Financial statements of the company Big Date and business analytics Cloud computing services	Final certification Manufacturing practice III	<p>Content: theory of valuation, objectives, principles of asset valuation, value standards, regulatory legal acts of the Republic of Kazakhstan in the field of valuation, methodology for valuation of assets, organization of market research in order to evaluate a specific object, business analysis using internal and external information, rates discounting and capitalization ratios, report design in accordance with the requirements.</p> <p>Expected results:</p> <p>Know: basic concepts used in valuation activities; the regulatory framework and system for organizing valuation activities in Kazakhstan; the main methods for assessing the value of assets and business of companies;</p> <p>Be able to: apply various methods and methods of asset value analysis; collect data for evaluation, systematize and interpret them; assess the value of assets and business by various methods; compare the results obtained and summarize them in the evaluation report.</p> <p>Skills: own tools for analysis and forecasting, methods for assessing the value of individual business assets: real estate, machinery and equipment, intangible assets, financial assets, etc.</p> <p>Competencies: professional</p>
14	Business valuation	5	Economic analysis 1C accounting Financial statements of the company Big Date and business analytics Cloud computing services	Final certification Manufacturing practice III	<p>Content: economic content of the basic concepts of valuation in general and business valuation in particular; examines the theoretical aspects of assessing the company's capital and shares in it; the array of information necessary for the assessment is determined.</p> <p>Expected results:</p> <p>Know: fundamental concepts of valuation, goals and principles of business valuation; the main characteristics of enterprises and organizations as an object of assessment; methods of financial analysis and the technique of its application in business valuation; approaches and methods of business valuation</p> <p>Be able to: apply methods and tools for business valuation; analyze information for its application in order to assess the value of property objects; use the information provided by the appraiser in the appraisal report;</p> <p>Skills: own the methodology for collecting and preparing information for business valuation in order to make managerial decisions, identifying an array of information for conducting business valuation.</p> <p>Competencies: professional</p>
Modul 15 Organization module and logistics					

15	Institutional economy	5	Microeconomics Management Strategic management	Final certification	<p>Contents: basic concepts of modern institutional economic theory, the essence of economic interactions at the institutional level. The assimilation of institutional economics is necessary for the formation of skills in the practical activity of the theory of property rights, transaction costs, contracts, institutional changes, knowledge in the field of fundamental, social, economic sciences in the volumes provided for the study of students of economic specialties.</p> <p>Expected results:</p> <p>Know: the main historical schools of institutionalism formation; methodological foundations of the new institutional economy; concepts and properties of institutions within the framework of the latest institutional approach; classification of institutional concepts; the role of enterprises in the institutional process; the role of the state in the institutional process;</p> <p>Be able to: systematize the most important categories of modern institutionalism; to establish the main areas of application of institutional analysis; to show how institutions work in various fields; to explain real phenomena using the tools of institutional theory;</p> <p>Skills: To have the skills to analyze the quality of the institutional environment, the application of the provisions of the institutional theory of economic development of Kazakhstan; the main network models of the market and the network of states existing in the field of international relations</p> <p>Competencies: special</p>
----	-----------------------	---	--	---------------------	---

15	Operations management	5	Microeconomics Management Strategic management	Final certification	<p>Contents: fundamentals of operational activity management in the conditions of developing globalization of the economy, formation of operational and process strategies, quality management, forecasting of the future of the operating system, fundamentals of the development of new products and services, placement of production and equipment, human and material resources management, projects.</p> <p>Expected results: Know: the purpose, objectives and principles of operational management; the relationship between strategic, tactical and operational planning of logistics activities in supply chains; the tools of production management systems; the main stages of the organization of operational processes; the methodology of planning and management of production in accordance with various management systems; to have a holistic view of the processes and phenomena occurring in production systems Be able to: use methods and tools of operational management in order to improve the efficiency of process management; make production, procurement and sales plans at the levels of summary, preliminary and detailed planning; use specialized software for planning and management of production systems; Skills: to master the methods of planning and managing production processes, to have the ability to find organizational and managerial decisions in professional activities and the willingness to bear responsibility for them Competencies: special</p>
Modul 19 - Module digital activity and development of world economic relations					
16	Business Law	3	Planning and budgeting Internal production planning and budgeting	Final certification	<p>Contents: The discipline studies business law, principles of business law, legal features of the creation, reorganization and liquidation of business entities, state regulation of business activity, features of the protection of the rights of entrepreneurs and the resolution of economic disputes, legal regulation of exchange activities, investment activities, foreign economic activity and a simple partnership, a joint activity agreement, a consortium.</p> <p>Expected results: Know: composition of the budget system and stages of the budget process; issues of legal regulation of state revenues and expenditures; the procedure for budgetary financing; legal bases of monetary circulation, crediting and settlements; forms, types and methods of financial control, as well as the competence of the bodies exercising it in the Republic of Kazakhstan; Be able to: systematize, generalize legal information on the activities of financial institutions and economic entities for use in professional, including entrepreneurial activities, analyze and legally qualify typical violations of</p>

					accounting, tax and cash management discipline. Skills: examination of payment and settlement documents used in the implementation of financial and economic operations in commercial and budgetary institutions subordinate to the authorities of the Republic of Kazakhstan Competencies: special
16	Competition law	3	Planning and budgeting system Internal production planning and budgeting	Final certification	<p>Content: economic interactions arising within this system and related to the use of natural resources. The discipline is a synthesis of economics and ecology and studies the processes of production, redistribution and consumption of goods and services, as well as the state of ecosystems, taking into account the impact of human economic activity on them.</p> <p>Expected results:</p> <p>know: Knows the experience of Kazakhstan and foreign antimonopoly authorities; features of legal regulation of competition; features of regulatory regulation of competitive relations; the role, place and importance of competition policy; models of competition and competition law.</p> <p>be able to: Be able to organize work on the legal regulation of competition and on the conduct of competition policy; develop the main types of contracts and agreements taking into account the requirements of antimonopoly legislation; develop local regulations of the organization taking into account the requirements of antimonopoly legislation; link together economic and legal processes in the field of competition regulation and the application of antimonopoly legislation.</p> <p>possess: Has the skills of drafting local regulations of the organization, taking into account the requirements of ensuring compliance with the current antimonopoly legislation when making legal decisions in the field of competition; drafting contracts and agreements in the field of competition and taking into account the requirements of antimonopoly legislation.</p> <p>Competencies: special</p>
Profiling disciplines					
Optional components (OC)					
Modul 19 - Module digital activity and development of world economic relations					

1	Digital economy	6	Information and communication technologies Macroeconomics	Final certification	<p>Contents: goals, objectives, basic directions for the development of the digital economy, the main technological components of the digital economy, the organizational foundations and structure of the digital economy, digital security, state functions and legal support for the transition to a digital economy, the experience of foreign countries and the CIS countries on the development of the digital economy, the strategy for the development of the information society in the Republic of Kazakhstan, promising areas and services of the digital economy.</p> <p>Expected results:</p> <p>Know: the main provisions of the national program "Digital Economy of Kazakhstan in their application to the chosen branch of professional activity, the main areas of application of information technologies and systems in the economy.</p> <p>Be able to: describe the possibilities of using information technology and innovative approach, process economic information using software; demonstrate financial and economic calculations in MS Excel; analyze the business processes of the enterprise and evaluate their effectiveness.</p> <p>Skills: master the methodology of collecting information, organize economic and managerial activities using information technology. Competencies: special</p>
1	Innovative economy	6	Information and communication technologies Macroeconomics	Final certification	<p>Contents: the main provisions of the theory of innovation, innovation and the cyclical development of the economy, innovative entrepreneurship as a special form of economic activity, the main elements, the content and organizational structures of innovation, the market for scientific and technical products, the infrastructure of innovation, the national innovation system, state regulation of innovation activity.</p> <p>Expected results:</p> <p>To know: the main possibilities of applying the innovative approach, the definitions and categories of innovations, the most important types of innovations and the patterns of functioning of the innovation market, as well as the stages of creating innovations, about the key players in the intellectual property market, about legal aspects and prospects for the development of an innovative economy. Be able to: describe the possibilities of using information technologies and an innovative approach, analyze the activities and quality of a company's work, including with the help of software products, to assess the production, innovative potential of firms, as well as situations on the innovation market, analyze situations on the innovation market and predict its development, be able to assess the risks, profitability and effectiveness of introducing innovations, including strategic decisions on long-term financing, evaluate innovative projects by various methods and make decisions regarding the possibility of making capital investments</p>

					Skills: possess the skills of analyzing economic information; preparation and adoption of investment decisions of a short-term and long-term nature; drawing up and implementing a behavior policy in the
